

# GLOBAL OVERVIEW

**PRESENT BY**

KEERTHIKA

# Data Import

Imported raw dataset (Excel with multiple sheets) into Power BI.

Verified column names, data types, and overall structure.

# Data Cleaning

Removed duplicate records.

Handled missing/null values (removed or replaced where necessary)

Corrected inconsistent formatting (text, numbers, dates).

Renamed columns for clarity and consistency.

Removed unnecessary columns.

# Data Transformation (Power Query)

Changed data types (e.g., Text → Whole Number, Decimal)

Created calculated columns (e.g., Population Density, Year grouping).

Filtered irrelevant records.

Split and merged columns where required.

Standardized categorical values (Region, Income Group).

# Tool Used

Microsoft Excel

## Statistical Techniques Applied:

Mean (Average)

Median

Minimum & Maximum

Standard Deviation

Variance

Range

	DESC STATISTICS		
	Mean	207254342	
	Median	6476322	
	STDEV	679655598

	RANGE	7442131299	

**DAX measures were created to perform dynamic calculations and enhance analytical insights within the Power BI model.**

## **Measures Developed:**

### **Average Literacy**

**Calculates the average literacy percentage across all countries.**

### **Country Count**

**Counts the total number of distinct countries in the dataset.**

### **Total GDP**

**Computes the overall GDP by summing GDP values across countries and years.**

### **Total Population**

**Calculates the average population across records.**

### **GDP Per Capita**

**Divides Total GDP by Total Population to measure economic output per person.**

**GDP Per Capita = DIVIDE([Total GDP], [Total Population])**

**Rank GDP = RANKX(ALL(COUNTRY), [Total GDP], , DESC)**

## Insights & Analysis

**The dashboard provides a comprehensive global overview of economic and demographic indicators across 218 countries. The analysis highlights significant regional disparities in total GDP contribution and population distribution. Certain regions demonstrate strong economic dominance, while others contribute comparatively less, indicating uneven global development.**

**GDP per capita rankings reveal a clear gap between higher-income and lower-income countries, reflecting economic inequality. Trend analysis over the years shows consistent long-term growth, with noticeable acceleration in recent decades. Additionally, population size does not directly correspond to higher economic output per person, emphasizing structural and income-level differences across regions.**

**Overall, the visualization enables comparative analysis, trend identification, and performance ranking, supporting data-driven insights and strategic understanding of global patterns.**
